

## Windows 10 Slide Show

1. Windows 10 Installed – This is what it will look like when you are done.
2. Details of the actual installation on 7/29/2015. This is TH1 Professional Build 10240, and the final commercial release may be slightly different.
3. Downloading the file will take anywhere from 5 minutes on a fast Comcast connection to over an hour on a slow DSL or ATT U-verse connection
4. This is the first of three phases of the install – Copying files even on a Fast i7 with a very fast SSD drive it takes a while and the screen goes blank a couple times
5. Now we start the second of three phases of the install – Installing features even on a Fast i7 with a very fast SSD drive it's a little quicker but it has the disturbing habit of the screen going blank while it reboots without letting you know
6. Finally the last phase a bit quicker but like the other phase the screen goes blank while it reboots without letting you know
7. Finally we are ready to start the install process that we are used to seeing
8. The normal Legal stuff, you know I agree to whatever you say, Blah Blah
9. Hmmmmm, interesting you might be tempted to just accept the express install. NOT RECOMMENDED and we will see why in the next pages Notice in the left lower corner the words **Customize settings** in a lighter color not as bright as the dialog under Get going fast we will select **Customize settings**.
10. Note the third item **\*\*Let apps use your advertising ID for experiences across apps\*\*** No I don't think so
11. Now this Customize setting looks pretty simple but let's look at the Connectivity and error reporting section.  
First item – Turn Off so you decide what networks to connect to  
Second item – Turn Off , Do you really want to automatically connect to Networks you don't know anything about??  
Third Item Leave On
12. These are the changes I made to my Desktop and Laptop Settings
13. I took all of the defaults
14. Result of the defaults, the jury is still out about the Photo selections!!!
15. Finally, now if you didn't have a Microsoft Account, this would be the place that you would have to create one. That is why we recommend getting one before you start the update.
16. Wrong it does take a while even in my i7 & SSD based system
17. This one goes fairly quickly unless you have a lot of Applications
18. Finally after rebooting a number of times during this whole process you get to your desktop, assuming you have a Desktop or Laptop computer.  
The system has to install all your attached devices, note printers are installed with the basic Windows drivers and you will have to load the drivers from your printer manufacturer to get all the features they install for your printer or All-in-One printers
